

Abdul Rehman

Full-Stack & AI Engineer

mabdulrehman951@gmail.com | github.com/abdulrehmann231 | linkedin.com/in/abdulrehman-nasir-tobaria | Karachi, Pakistan (Remote)

SUMMARY

Full-stack and AI engineer who ships production-ready web apps and AI integrations — from RAG systems and agentic developer tools to SaaS platforms used by real customers. Comfortable across the stack: designing APIs and databases, building AI agent loops, and crafting thoughtful frontends with Next.js, Node.js, Python/FastAPI and Spring Boot.

EXPERIENCE

Software Engineer

Jun 2025 – Present

Gitwit

Remote

- Built Gitwit's browser-based AI coding agent (Cursor-style), enabling natural-language-driven code generation and editing directly in the browser.
- Built and integrated E2B sandbox templates to run code live with real-time preview, streamlining developer workflows.
- Developed GitHub integrations enabling seamless repository connectivity for AI-driven code modifications.

AI Engineer

2025 – Present

Background Agents (backgrounder.dev)

Remote

- Built MCP (Model Context Protocol) server integrations and tool-connection layers in TypeScript, letting AI coding agents connect with any MCP-compatible external service.
- Designed a token gateway service and custom API endpoints for secure, authenticated access to AI agent operations across sandboxed environments.
- Contributed to an open-source AI agent platform (4,200+ commits, Apache-2.0) powering isolated sandbox execution, WebSocket terminals and Claude Code integration.

Full-Stack AI Engineer

Aug 2025 – Jul 2026

Softject

Hybrid · Part-time

- Built AI agents, automation workflows and RAG features (document ingestion, embeddings, vector search, LLM responses) across Next.js, Node.js, Python/FastAPI and PostgreSQL.
- Previously AI Engineer Intern and Full-Stack Developer — built responsive web apps with Next.js and full-stack technologies.

Backend Intern

Jul 2024 – Sep 2024

Central Depository Company of Pakistan

Onsite · Karachi

- Developed REST APIs and backend microservices with Spring Boot, using SQL databases and JWT-based authentication to secure inter-service communication.

SELECTED PROJECTS

EarthLink AI — AI-native geospatial platform where an agentic loop orchestrates 14 tools and 6 living UI components, turning plain-English prompts into map actions. NDVI & land-surface temperature derived from Sentinel-2 via FastAPI + Google Earth Engine. (Next.js, Python, Tambo AI, Mapbox)

Draftly — Real-time collaborative meeting whiteboard with sub-50ms sync using Yjs CRDTs over WebSockets; AI summaries turn sessions into structured notes. (Next.js, Fastify, Yjs, PostgreSQL)

ResearchCore — Document QA & summarization — upload papers or URLs and get RAG-grounded answers with summaries. (Next.js, Firebase, RAG)

Eeko-AI — Agri web app pairing NASA satellite data with YOLOv5 detection and LLaMA analysis for crop disease identification. (Next.js, FastAPI, YOLO v5)

SKILLS

Languages: TypeScript, JavaScript, Python, Java, C++, C#, SQL

Frameworks: React, Next.js, Node.js, Express, Spring Boot, .NET, FastAPI, TailwindCSS

AI & Data: RAG, LangChain, YOLO v5, Groq API, HuggingFace, PostgreSQL, MongoDB, Firebase

Tools: Git, GitHub, Docker, Linux, Postman, Vercel

EDUCATION

B.S. Computer Science — FAST NUCES Karachi, Pakistan · Expected 2027
Relevant coursework: Data Structures & Algorithms, Object-Oriented Programming, Databases.
